Education

University of Washington

M.S. in Information Management (Specialization in Data Science & AI) (GPA: 3.9/4.0)

Sept. 2025 – June 2027

Seattle, WA

Peking University

Minor in Economics (GPA: 3.8/4.0)

Sept. 2023 – June 2025

Beijing, China

Beijing International Studies University

B.A. in Turkish (GPA: 3.9/4.0)

Sept. 2021 – June 2025

Beijing, China

Skills

Languages & Databases: Python, Java, JavaScript, Golang, SQL, Bash, Shell, Pine Script, C, C++

Backend and Cloud: FastAPI, Spring Boot, AWS (EC2, S3), Docker, Linux, Git, GitHub Actions

Data and AI Tools: SQL, PostgreSQL, MongoDB, Pandas, NumPy, PyTorch, Hugging Face, Langflow

Languages: Mandarin, English, Turkish, French, GRE (334+5)

Experiences

Industrial Securities Co., Ltd.

Jan. 2025 – Sep. 2025

Software Engineer Intern, Research Systems Team

Beijing, China

- Built a **Python-based** backend workflow that converted raw time-series files into structured inputs, executed **1,300+ config-driven runs**, and stored results in SQL tables for review.
- Developed batch-run scripts to manage input paths, run configurations, output folders, execution status, and failure logs across repeated workloads.
- Added validation checks for missing tickers, broken links, date mismatches, stock split adjustments, cash dividend adjustments, and incomplete input records before each run.
- Used Git to version scripts, configuration files, and run settings, making prior experiments easier to reproduce, debug, and compare across repeated runs.

Guotai Haitong Securities

Jan. 2024 – May. 2024

Data Systems Intern, Investment Banking Division

Beijing, China

- Built SQL- and Excel-based internal trackers for due diligence source files, bank statements, confirmations, customer lists, supplier records, and transaction materials.
- Used Python scripts to normalize company names, financial fields, date formats, and source-file records before loading them into structured review tables.
- Wrote SQL queries to flag missing confirmations, unmatched dates, duplicate entities, and inconsistent naming across fragmented business documents.
- Prepared review-ready tables with source references beside key figures, helping senior team members trace data issues faster during transaction review cycles.

Institute of Economics, Chinese Academy of Social Sciences

Mar. 2023 – Aug. 2023

Research Data Systems Assistant

Beijing, China

- Built a Python and SQL pipeline that consolidated **8 raw datasets** into **50+ analysis-ready tables** for repeated research analysis.
- Created a transformation layer with **120+ variable mappings**, standardizing IDs, date fields, demographic variables, and category labels across repeated updates.
- Wrote **20 reusable SQL templates** for recurring summaries by population group, age range, region, and time period.
- Added **25 validation checks** for missing values, duplicate records, invalid IDs, inconsistent categories, and abnormal numeric values, writing **600+ flagged records** into exception tables.

Projects

PerfTrace Engine — C++ Workload Log Parser & Benchmarking Tool

- Built PerfTrace Engine, a **C++17** command-line tool that parsed workload logs, runtime events, and failure records to analyze performance bottlenecks across repeated runs.
- Implemented the core parser with **STL containers**, **file I/O**, **timestamp validation**, **error handling**, and **structured event aggregation** for runtime, throughput, memory, and failure metrics.
- Added **CMake**, **gdb debugging**, **AddressSanitizer**, **Valgrind**, and **clang-tidy checks** to detect memory errors, unsafe parsing patterns, and edge-case failures.
- Created benchmark and regression test cases for malformed logs, missing fields, duplicate events, invalid timestamps, oversized records, and abnormal runtime spikes.
